

*fuel the shift™*

EVoKe is an advanced cloud-based Charge Station Management System (CSMS) designed to effortlessly manage electric vehicle (EV) charging stations. The EVoKe platform supports a diverse array of Level 2 and DC Fast Chargers from top-tier manufacturers.

**Operational Control:** Effortlessly oversee individual charge station locations or an entire portfolio of locations featuring diverse hardware equipment—all through a unified platform. This streamlines the processes of management, monitoring, control, and reporting.

**Advanced Load Management:** Limit maximum load by location, subpanel, time-of-day, or demand response event.

**Driver mobile app:** Provide drivers with easy-to-access station details, including charger availability, power output, pricing, and location details, simplifying their search for nearby charging facilities. Initiate charging session

**Flexible Pricing Strategies:** Customize pricing for paid stations based on specific criteria such as location, time-of-day, and charger type.

**Tailored Pricing Policies:** Implement diverse pricing policies for distinct user groups, empowering operators to customize pricing structures based on membership, loyalty programs, or specific user categories.

**Group Management:** Charge stations can be grouped by location, department, geographic area, or any user defined criteria for restricted user access or reporting.

**Detailed Analytics:** Access comprehensive charging session data instantly, facilitating in-depth business analysis and cost optimization. Revenue, energy cost, utilization, and transaction data can be downloaded to Excel for all or select locations for specified calendar periods.

**User-Friendly Dashboard:** Navigate intuitively and visualize data effortlessly through a streamlined dashboard for quick insights into station performance.

**Seamless Charging:** Simplify the charging experience for drivers through RFID, by integrating RFID drivers can effortlessly initiate charging sessions with the tap of a card. Depending on the charger, Plug and Charge and Tap to Pay are also supported.

**Smart Diagnostics:** Automated alerts for communication loss, equipment faults, and failed transactions can be routed to a Help Desk or a field support & service dispatch system.

**Third-party integration:** API architecture allows integration with third-party apps for billing, field service and support, reporting, etc.
